ARMINIUS brushes for texturing

With this style of brush, you can create the texture look on the surface according to your needs. The increasing demand for the textured look on real wood fronts, solid or veneer, ARMINIUS Tooling has developed tools for all different processes.

One option is to brush out the softwood and preserve the dark or hard wood to create a textured or weathers look on the wood surface.

One of the benefits offered with the ARMINIUS brush system is that multiple brush lengths can be used in the same base tool. The brushes can be easily changed to achieve the desired texture depth along with adjusting the feed speed, pressure and RPM. With the Arminius system you can also create many different looks by mixing the different bristles types in the same head, to give the deep aggressive look, or the softer shallower look. By mixing nylon Brushes with the Steel or Brass bristles, you can sand the surface at the same time as texturing to be ready for an oil or a finish application. Another benefit of the ARMINIUS brush system is the open construction of the brush, this allows the bristle to penetrate deeper into the wood structure.

APPLICATION EXAMPLES

ARMINIUS sanding brushes

With the two part sanding brush, you can process all wood surfaces with these abrasives. You only need to change the brushes to give the end result you are looking for. Save money and protect the environment with the two-part construction that the ARMINIUS sanding brush system offers.

Only the abrasive layer is changed with the backing brush remaining in place that is use over a long period of time, getting the most out of the brush.

By using the ARMINIUS brush system, you can send the product directly to the finish line ensure that all surfaces are prepared evenly and consistently. The end result is the color consistency of the work piece is to the quality specification that is outlined. The sanding strip is manufactured with the slashed abrasives design. Many options are available based on the application and the desired end result. The overall height, as well as the width of the slit, gives different end results. Depending on the application there are different styles cut in to the ends of the abrasives round, pointed or flat.

ARMINIUS slashed abrasive

The slashed abrasive is changed separately from the backing-brush, this maximizes the use of the brush.

YOUR BENEFITS

- Easy and quick change of the abrasive fitting
- Limitless in terms of dimensions
- Can be used as bore or shank tool
- Can be used on all common machines
- Can also be used on boring machines
